February 4, 1996

To Whom It May Concern:

Western Line Builders, Inc. has been working for Mt. Wheeler Power, Inc. since May 1990. They have built overhead three phase and underground 24.9 KV and have worked several months upgrading from 4.16y/2.4 KV to 24.9y/14.4 KV overhead, they have done this hot.

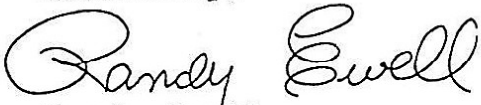

I have been very pleased with their ability and knowledge of REA construction. Their workmanship is top quality and they seem to show a lot of pride in their work.

Our Engineering Department has been pleased with the working relationship that has been developed. They check with us on changes and keep us informed of the progress.

They have worked well with the public and kept them informed of any outages that would effect them.

I would be pleased to recommend Western Line Builders because of their reputation they have built with us.

Sincerely,

Randy Ewell  
Manager of Engineering
